

Theory of Computation

Exercise 9: (Context-free grammar part 2)

1. Show that $L(G1) \neq L(G2)$.

$G1 = (\{S\}, \{a, b\}, S, P1)$

$P1: S \rightarrow aSb \mid SS \mid \lambda$

$G2 = (\{S\}, \{a, b\}, S, P2)$

$P2: S \rightarrow aSb \mid abS \mid \lambda$

2. Find CFG for the language L.

$$L = \{ a^i b^j c^k : j = i + k \}$$

*3. Use CYK algorithm to find whether **abab** $\in L(G)$.

(Homework 7)

$$G: S \rightarrow AB$$

$$A \rightarrow BB$$

$$A \rightarrow a$$

$$B \rightarrow AB$$

$$B \rightarrow b$$

<u>a</u>	<u>b</u>	<u>a</u>	<u>b</u>
A	B	A	B
<hr/>			
<u>ab</u>	<u>ab</u>	<u>ba</u>	
S,B		S,B	
<hr/>			
<u>aba</u>	<u>bab</u>		
	A		
<u>abab</u>			
A			

Ans. **abab** $\notin L(G)$
